## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, filed 1/18/06, with respect to the rejection(s) of claim(s) 1 have been fully considered and are persuasive based upon amendment. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of United States Patent Number 6,304,687 to Inoue et al (hereinafter Inoue).

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2, 7, 10, 16, 19, 34, 37, 139 and 142 are rejected under 35 U.S.C. 102(b) as being anticipated by United States Patent Number 6,304,687 to Inoue.

Inoue discloses in figures 8-9, 14, and 17, an optical waveguide circuit comprising:

- An optical waveguide (4);
- A first loss component for causing a diffraction loss to light propagating through said optical waveguide (42/43); and
- A second loss component provided at least one of before and after said first loss component (46),
- Wherein said second component includes a region where light confinement is weakened with respect to said optical waveguide and the width of the region is determined such that a diffraction loss in the region becomes smaller than the

diffraction loss in the first component (item 46 is a waveplate and as such would appear to have smaller diffraction loss than a groove), and

- Wherein the spacing between the first loss component and the region is determined at such a distance that the light passing through the region can reach the first loss component before a leakage of the light at the region completely turns to radiation (it is noted that no type of radiation is disclosed and that light is a form of radiation)

As to claim 2, the spot size would change in the structure disclosed in figure 37B.

As to claim 7, silica-glass is used.

As to claim 10, a groove is formed by removing part of the cladding and core of the optical waveguide.

As to claims 16 and 19, the groove is filled with temperature sensitive material.

As to claim 34, a waveguide plate as disclosed would inherently have to fill a gap made in the core.

As to claim 37, thin film polyimide is used (polyimide is a common material used in claddings).

As to claims 139 and 142, the second loss component has a specific refractive index.

### *Conclusion*

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

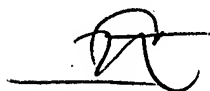

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
